

## RDO - 5D 'Roller Door Opener'

### FEATURES

- RHO roller door openers are easily installed in minutes to most new or existing roller doors on garages (up to 5m wide & 3m high)
- The unit is supplied with 2 x 4 button remote transmitters (operate up to four doors from the one transmitter). Additional door activator buttons are also positioned at side & base of unit for use inside garage.
- Employs 'state of the art' secure rolling code technology (over 4.29 billion combinations). A new secure code is generated every time a transmission is sent from the transmitter to prevent copying of the code
- LED courtesy lights remain on for approx. 3 minutes after door operation
- An in-built buzzer sounds each time the door is activated as an additional safety precaution.
- Manual release handle. Can be used in case of power loss.
- Auto close mode & safety beam device (optional extra)

- In built (anti break-in) alarm system (alarm/speaker is optional extra). The opener can be connected to an external alarm (optional), which will be activated when a "force-in" force is applied to the door.
- Optional ALS (Anti Locking System) - "The World's First". When used with the optional ALS device, the opener will allow you to keep the standard manual sliding door lock activated. Other openers require the manual door lock to be disabled when an opener is installed.

### WARRANTY

We at RHO Enterprises Pty. Ltd., are that confident of the quality of our products, we will provide a **full replacement** warranty within a 2 year period from the time of purchase.
